AF 11 – The Brewers Choice for High Performance Filtration

In the age of dry hopping, brewers are searching for more efficient ways to clarify their beer. The major challenges are high particulate loads and shorter storage times. This will eventually lead to early filter blockages, shorter filtration cycles and subsequently downtime.

The FIBRAFIX® AF 11 filter sheet with its unique partial perforation technology combines all advantages brewers are looking for when pre-filtering or standardizing turbidity of their hazy beers.

A unique technology

The partial perforation technology is a special surface which creates increased filtration performance where liquids with a heavy load of particulates must be filtered. We constantly perfected this technique which is successfully used for pre-filtration of Wine, Sugar, and Spirits. The special sheet composition, without any mineral components results in no significant effect on flavor of the filtered beer. FIBRAFIX® AF 11 cellulose filter sheets are made from natural materials and are biodegradable, making them an environmentally friendly choice.

FIBRAFIX® AF 11 has been developed with and for technology leaders in craft brewing. In combination with a NOVOX® ST filter press the AF 11 can filter beers in a one- or two-stage filtration for many innovative beer creations. The benefits of the FIBRAFIX® AF 11 are also available in the backflushable FIBRADISC® PLUS2 filter module. With the enhanced surface capacity this lenticular module delivers highest regeneration efficiency and longest filtration runs.

"The AF 11 is the perfect filter sheet for the pre-filtration of our very hoppy beers".

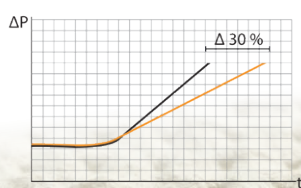

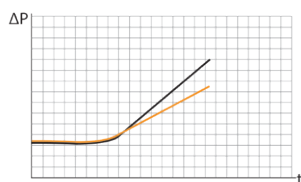

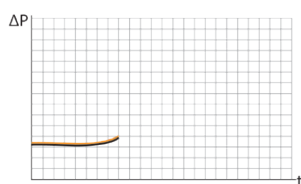

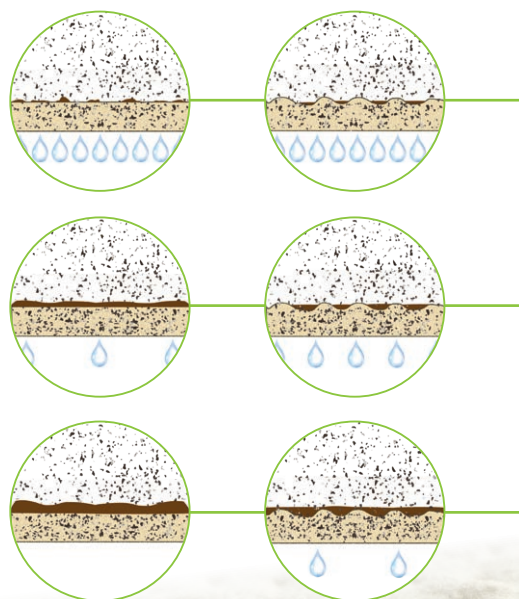

Kain Escobar, K-Star Brewing Solutions LLC

Product	Description	Best use
FIBRAFIX® AF 11	Coarse filter sheet	Removal of coarse particles and standardizing turbidity levels

Performance comparison between a regular depth filter and FIBRAFIX® AF 11

Regular depth filter

FIBRAFIX® AF 11

■ Regular depth filter
■ FIBRAFIX® AF 11

Highest performance

15% increased filtration capacity

Unique surface

20% more surface compared to regular filter sheets

Sustainable

Biodegradable DE free filter material
